

POSITION  
IT systems designer

Billon is accepting applications for work on a specific project with the potential for future full time employment. This is a unique opportunity to gain experience with an innovative Financial Technology firm developing cutting edge technology based on proprietary second generation blockchain right in the heart of Warszawa.

**Job description:**

- Programmatic interface design
- Describing processes and API specifications
- Research, analyse, and enhance existing system designs
- Working closely with technical groups and management

**Requirements:** We are looking for applicants interested in programmatic interface design. Successful applicants should have a computer science or IT educational background, with strong verbal and written English communication skills. Within this project critical thinking and the ability to work independently are also important. The applicant's role in this project requires the understanding software system designs, and isolating components into their logical parts. Programmatic skills are a strong plus and will be taken into consideration for potential future full time employment. The project is expected to last 2-3 months.

**We can offer you** a job in an innovative company with friendly atmosphere, flexible working hours, and attractive salary that suits your skills.

**Additional information**

Established in 2012, Billon is a forward-thinking company willing to change the way money moves around the world. We are a 50+ team of people who create a revolutionary instant payments system tapping on advanced cryptography and distributed ledger technology. We are currently present in Poland and UK.
