

## Front-end Intern

[Verify](#) is hiring a Front-end Intern to help us build a new product for making instant, low-cost bank transfers possible.

- **About Us:**

*We're a small, remote team with a big vision -- to make it easier to buy and sell online.*

*Moving money around is hard. Most people keep their money in bank accounts, cash or investments. But how do you move that money around without long wait periods and extortionate fees? It's the 21st century -- you'd think we'd have figured it out by now.*

*Verify Payments solves this problem: a low-cost, fast and scalable payments solution -- one that does not require that users adopt a new method for stored value.*

- **About the role:**

*We call this new product Verify Payments, and you'll be involved on pretty much everything the user sees and interacts with. This involves everything from designing the dashboard screens to website pages to the email confirmations users receive when a transfer is complete.*

- **Requirements:**

*We're looking for a designer that can translate requirements into beautiful interfaces using their weapon of choice, and later implement them using HTML/CSS. Working knowledge of Javascript is a strong plus!*
